

STRUCTURAL AUDIT™

The New Standard for Capital Flow Governance

Why It Matters

Financial audits measure outcomes. They do not measure structure. Yet collapse begins at the structural level—long before financials reveal distress.

What It Delivers

Structural Audit™ is not a diagnostic. It is an enforcement tool. It applies the Quality of Structure™ standard to deliver a binary pass/fail opinion on whether an entity's framework is sound enough to hold capital.

Core Attributes

- Board-grade: designed for fiduciary oversight, not management reporting.
- Binary: pass/fail with no partial credit or subjective interpretation.
- Evidentiary: backed by DOI timestamps and chain-of-custody protection.
- Scalable: deployable across transactions, portfolios, and operating entities.

Why Boards Commission It

- To enforce governance integrity before collapse can occur.
- To assure lenders and investors that capital rests on lawful structure.
- To identify indispensable vs. disposable structures with precision.

Position

Structural Audit™ now stands beside financial audit as a mandatory safeguard for capital flow.
